

Reality-2-Go

Real-time indexing on the go!

11:00:00:04

Go Light with Reality-2-Go

With **Reality-2-Go** you can index live video from a laptop. Take **Reality-2-Go** anywhere: it's a light, simple way to index content, while the camera is rolling. You'll spend less time searching for shots and more time creating a show.

Build Stories on the Go

With **Reality-2-Go**, simply plug in the camera feed and index away. Start building your story on the spot, with video material shot seconds prior.

Find the great scenes every time. As shooting occurs, mark in and out scenes of interest and rate them. Later, you're sure to find what you need, fast.

Pre-edit while you're on the road. Just finished a shoot? You can start building your show right away, directly from **Reality-2-Go**. Search clips, select and reorder them, refine start and end time codes, play the story and finally email the EDL that is generated to your editing staff who can import it directly into their NLE.

Share the video index with your staff. You can share all the video material and the entire index. Simply connect **Reality-2-Go** to the Searchable Video Library (available separately) and let your entire staff search, play, build and email stories and EDLs, through a standard Web browser.

Video Indexing Solutions

Reality:
Rugged, real-time indexing studio

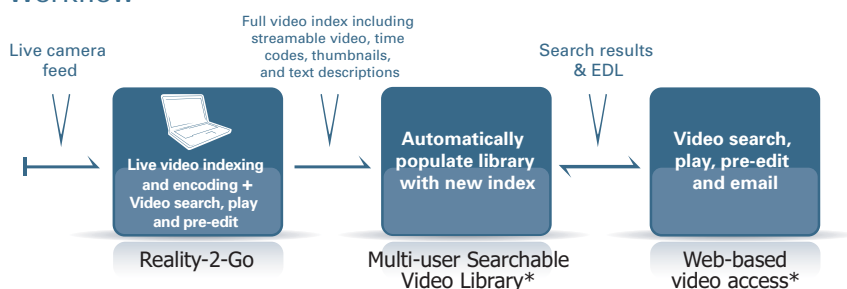

Reality-2-Go:
Portable, real-time indexing from a laptop

Finality:
Off-line indexing

- Indexing features:
- Use full text (plain English)
 - Mark in and out
